

Maintenance for the High h Batch 2™ Oven

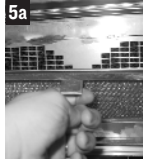

The Daily and Deep Cleaning procedures below will help in maintaining the High h Batch 2 oven. Be sure to use only TurboChef Oven Cleaner. Using any other cleaner can damage critical parts and may void warranty on those parts. To order TurboChef Oven Cleaner, Oven Guard, or a new filter, call 800.90TURBO, +1.214.379.6000, or your Authorized Distributor.

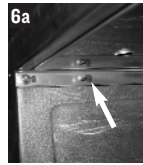

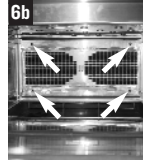

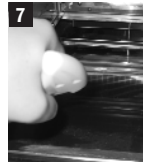

Supplies and Equipment: TurboChef Oven Cleaner (P/N: 103180), TurboChef Oven Guard (P/N: 103181), nylon scrub pad, cleaning towel, soft-bristle cleaning brush, Phillips screwdriver (only if required for top jetplate removal)

DAILY CLEANING

- 1**  **Step 1: Prepare the Oven.**
- Ensure the oven is turned off – press the ON/OFF key.
 - DO NOT attempt to clean the oven until the display reads “Ready to Clean.”
- 2**  **Step 2: Remove the Oven Rack.**
- Wash, rinse, sanitize, and dry the oven rack.
- 3**  **Step 3: Clean the Grease Filter.**
- Grasp the filter latch and lift and pull out until the filter and bracket lie flat (Figure 3).
 - Remove the filter from the bracket and gently rinse it.
- 4**  **CAUTION: DO NOT scrub the filter or use a water jet when cleaning.**
- If required, replace the filter (HHB-8287) if it has large holes or is becoming detached from the frame.
- 5**  **Step 4: Clean the Oven Door and Cook Chamber.**
- Using a damp towel, remove food particles.
 - For stubborn stains, spray Oven Cleaner and allow it to penetrate for 5 minutes.
 - Scrub with a nylon scrub pad.
 - Wipe the oven door and cook chamber with a clean damp towel.
- 6**  **Step 5: Reinstall the Grease Filter and Oven Rack.**
- Using a clean dry towel, thoroughly dry the cook chamber.
- 7**  **Step 6: Apply Oven Guard**
- Follow instructions on bottle.
- Step 7: Wipe the Oven Exterior with a Clean Damp Towel.**
- CAUTION: DO NOT** spray chemicals into any openings, such as the louvers on the side panels or the cooling fans on the back of the oven. Doing so can damage critical oven components, resulting in a non-warranty service call.

DEEP CLEANING

- 1**  **Step 1: Prepare the Oven.**
- Ensure the oven is turned off – press the ON/OFF key.
 - DO NOT attempt to clean the oven until the display reads “Ready to Clean.”
- 2**  **WARNING: Possible injury can occur if the oven is not allowed to cool properly before cleaning.**
- Wash, rinse, sanitize, and dry the oven rack.
- 3**  **Step 3: Clean the Oven Door.**
- Using a damp towel, remove food particles.
 - For stubborn stains, spray Oven Cleaner and allow it to penetrate for 5 minutes.
 - Scrub with a nylon scrub pad.
 - Wipe the oven door with a clean damp towel.
- 4a**  **Step 4: Remove the Bottom Jetplate.**
- Remove the left and right support rails by gently pulling the rail out, then toward the middle of the oven (Figure 4a), and then out again.
- 4b**  **Step 5: Remove the Grease Filter and Bracket.**
- Grasp the filter latch and lift and pull out until the filter and bracket lie flat (Figure 5a).
 - Lift the right side of the filter bracket until you are able to remove it (Figure 5b).
 - Remove the filter from the bracket and gently rinse it.
- 5a**  **CAUTION: DO NOT scrub the filter or use a water jet when cleaning.**
- Wash, rinse, sanitize, and dry the filter bracket.
 - Insert the filter back into the bracket. If required, replace the filter (HHB-8287) if it has large holes or is becoming detached from the frame.

- 6a**  **Step 6: Remove the Upper Jetplate.**
- Remove both upper support rails by pulling the peg (Figure 6a).
 - Remove the upper jetplate. If additional clearance is required, remove the air diverter using a Phillips screwdriver (Figure 6b).
 - Wash, rinse, sanitize, and dry the upper jetplate and both upper support rails.
- 6b**  **Step 7: Clean the Cook Chamber.**
- CAUTION: DO NOT** spray Oven Cleaner directly on the back oven wall. Doing so may damage critical oven components, resulting in a non-warranty service call.
- Spray Oven Cleaner to break up stubborn stains and allow it to penetrate for 5 minutes.
 - Scrub with a nylon scrub pad.
 - Clean the cook chamber thoroughly with a clean damp towel.
- 7**  **Step 8: Dry the Cook Chamber.**
- Using a clean dry towel, thoroughly dry the cook chamber.
- 8**  **CAUTION: DO NOT** operate the oven with water, cleaner, or debris in the bottom of the cook chamber.
- 9**  **Step 9: Reinstall all Clean Parts.**
- Reinstall in the following order:
 1. Air diverter (if removed)
 2. Upper jetplate
 3. Upper support rails
 4. Bottom jetplate
 5. Lower support rails
 6. Grease filter and bracket
 7. Oven rack
- 10**  **Step 10: Apply Oven Guard.**
- Follow instructions on the bottle.
- 11**  **Step 11: Clean the Cooling Fan Housing**
- Using a dry soft-bristle brush, clean the rear cooling fan housing.
- 12**  **Step 12: Wipe the Oven Exterior with a Clean Damp Towel.**
- CAUTION: DO NOT** spray chemicals into any openings, such as the louvers on the side panels or the cooling fans on the back of the oven. Doing so can damage critical oven components, resulting in a non-warranty service call.
